A PRODUCT BY

EVA-LAST[®]
INSPIRED BY NATURE, DESIGNED FOR LIFE.

Introduction

Eva-Last® is proud to offer exceptionally low-maintenance alternatives to wood which last for years without the need for costly or time-consuming treatments, stains, or sealants. Evolver fencing is designed to be gentle on the Earth and give you a hassle-free fencing option for your outdoor space. This cleaning and care guide provides all the information you need to preserve the structural integrity and natural-looking beauty of your Evolver fence, available in Infinity capped bamboo composite. Please read and follow these instructions completely for warranty compliance purposes and to ensure that you enjoy your Evolver fencing and outdoor space to the fullest.

Cleaning your fence

Evolver fencing is naturally anti-microbial, stain and scratch resistant. Maintain the cleanliness of your fence by scrubbing or pressure washing when needed. For optimal board longevity, Eva-Last® recommends cleaning your fence when you notice stubborn marks from birds or weather. Evolver will weather to a natural matte finish over time and the steps in this cleaning and care guide will help to preserve its aesthetics and longevity.

The following basic and deep cleaning procedures are suitable for addressing mould and mildew, rust stains, tape marks, and most other forms of messes and stains. All of these are considered to be normal maintenance and are, therefore, not covered by the Evolver limited warranty.

What you will need

In order to properly clean your Evolver fencing you will need only standard household cleaning supplies, including:

A high-pressure hose with fan tip

Water

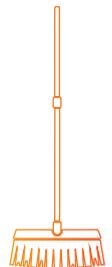

Dishwashing Liquid

Bucket

Sponge on telescopic arm

Hard-bristled broom with telescopic arm or pool brush

Please note: Do NOT use “off-the-shelf composite cleaners” on Evolver. These may jeopardise the fencing boards’ surface and nullify any related warranty claims. Instead, use regular liquid dishwashing soap.

Basic cleaning procedure

Follow these basic steps for the general cleaning and care of your Evolver fencing:

STEP 1:

Apply soapy water to your fence boards using a sponge for low-lying areas or a sponge or squeegee with a telescopic handle for high-lying areas.

STEP 2:

Use a hard-bristled broom with telescopic arm or pool brush to scrub the fencing. Clean thoroughly enough to remove all dirt and residue from the gaps between profiles. Scrub in the direction of the grain of your boards’ surfaces.

STEP 3:

Rinse your fencing surface completely with water.

Deep cleaning procedure

In order to remove stubborn spots, stains, or excessive dirt or organic waste from your Evolver fencing, carefully use a high-pressure washer which has a hose with a wide fan tip. Ensure that the pressure of this hose remains under 1500 psi and keep it at least 300 mm away from your fencing surface when spraying. Take extreme care when pressure washing your fencing boards. Stop immediately if any unusual change to your boards' surfaces appears and contact Eva-Last®.

For best cleaning results scrub your Evolver fence with a hard-bristle broom with telescopic arm, pool brush, or long-reach squeegee while pressure washing. Regular deep cleanings with both pressure washing and scrubbing will maximise the long-term performance of your Evolver fencing.

General care tips

- Ensure that you refer to the Evolver Technical Data Sheet (TDS) for more in-depth information and material compatibility.
- Clean up marks or messes from the fencing surface as soon as possible to prevent them from becoming stains.
- For rust removal use a hard bristle brush. Use gently so as not to harm the fencing surface.
- To remove construction marks, rub a small amount of alcohol on the affected area. Once the alcohol has removed the mark, scrub the area with soapy water to prevent any long-term damage from the alcohol.
- Most water, aqueous salt solutions, detergent solutions, dilute acids, and alkalis are also acceptable. However, any cleaning agent should first be tested on a small patch of Evolver fencing or a scrap piece of Evolver material before use. Refer to Appendix C of the Evolver TDS for a chemical compatibility table. Any cleaning agent used on Evolver which does not comply with this TDS may nullify future warranty claims.
- Consult Eva-Last® for advice on removing exceptionally stubborn stains before utilising any cleaning chemicals which are not sanctioned by the TDS.

What to avoid

Protect your Evolver fencing boards, and ensure warranty compliance, by keeping the following away from your fencing boards:

- "Off-the-shelf" composite cleaners.
- Strong detergents, oxidant concentrated mineral acids, aromatic and/or halogenated hydrocarbons, esters, ethers, or ketones.
- Insect sprays which contain any ingredient that may be incompatible with Evolver as listed in the Evolver TDS.
- Oils from certain plants as outlined in the Evolver TDS.
- PVC glues, cement, and paint.

Conclusion

Evolver gives your outdoor space an upgrade and lets you use your free time for relaxation instead of bothersome maintenance. By adhering to these simple cleaning and care procedures and the terms of your Evolver warranty you will be able to sit back and enjoy your Evolver fencing for years to come.
