Starter Board - 134.1 x 25.4 mm

Eva-tech IS

Grooved Board - 139 x 23.4 mm
Grooved Board - 137 x 23.4 mm

PRODUCT OVERVIEW

The I-Series Fastening Insert is a purpose-designed insert developed for selected optimised I-Series board profiles. While most I-Series installations utilise hidden clip systems and starter boards, some applications may utilise direct top-fixing for edge details, stairs, repairs, or custom installation conditions. The insert provides an optional reinforced fixing interface while maintaining the lightweight and material-efficient geometry of the board.

PRODUCT PROFILES

The I-Series Fastening Insert is a purpose-designed insert developed for selected I-Series board profiles.

INSTALLATION PROCESS

1

Turn the board upside down and slide insert into the cavity between the I-Series feet of the board. The insert should be positioned to align with the centre of your joist, at all points where you are top fixing through the board.

2

Flip your board over and check that the insert is correctly aligned with your fixing point on your joist.

3

Fasten your board through the inserts using approved metal or composite deck screws. On the grooved edge, you can continue using the concealed clips.
