

HULK FASTENERS.

FASTENED, FOR LIFE.

COLOUR GUIDE

HIDDEN FASTENERS

CLIP & CLIP SCREW PRODUCT RANGE

S-SERIES CLIP

Eva-Last created the S-Series clip to match the life expectancy and durability of Eva-Last composite decking materials. This product laid the foundation for the hidden fastener: no more protruding screws, no more ruined finishes, no more untidy aesthetics.

These clips are designed to be used with HULK clip screws to provide a hidden fastening system that gives a clean, neat finish to your deck installation.

S6 CLIP

Use for fastening grooved deck boards with a foot height of approximately 6 mm. The S6 clip works with both the metal and timber clip screw.

S9 CLIP

Use for fastening grooved deck boards with a foot height of approximately 9 mm. The S9 clip works with both the metal and timber clip screw.

chain
Collated decking clip

NEW

Stainless steel clip with polymer coating

Preloaded with screw for ease of installation

USED ON VARIABLE BOARD HEIGHTS OF 6 MM - 12 MM

Universal collated clips with preloaded screws. Available with either metal or timber clip screws.

FASTENERS

TIMBER CLIP SCREW

This screw is specifically designed for use with the HULK hidden deck clips to fasten the deck boards to timber substructure. No pre-drilling required.*

HIGH TECHNOLOGY MATCHING SCREWS

Colour matching HULK top fixing and trim screws for use with wood or metal frames are available in a variety of natural shades, and offer a tough and durable protective coating. Marine grade stainless steel screws are recommended for Class 5 regions. Stainless or nanocoated carbon screws are best for Class 4 regions and include a 15-year warranty.

METAL DECK SCREWS

Use the metal deck screw for fastening 20 to 25 mm thick composite deck boards onto most metal frames without having to pre-drill unless specified by the decking manufacturer. This screw is suitable for fastening deck boards onto metal frames of up to 2.0 mm without having to pre-drill; thereafter it is advisable to pre-drill. The detachable reamer wing is only operational in steel upward of 0.8 mm thick. For a tight grip ensure that the wing has broken off.

TIMBER TRIM SCREWS

Use the timber trim screw for fastening composite or timber fascia boards of up to 18 mm thick onto timber frames without having to pre-drill unless specified by the decking manufacturer. It is suitable for softwood and most hard-woods frames. Pre-drilling may be required for dense hardwood frames.
