A PRODUCT BY

EVA-LAST[®]
INSPIRED BY NATURE, DESIGNED FOR LIFE.

Introduction

Eva-Last® is proud to offer exceptionally low-maintenance alternatives to wood which last for years without the need for costly or time-consuming treatments, stains, or sealants. Oasis fencing available in Eva-tech bamboo composite is designed to be gentle on the Earth and give you a hassle-free, reliable fence for creating a more secure, usable, and attractive outdoor space. This cleaning and care guide provides all the information you need to preserve the structural integrity and natural-looking beauty of the Oasis fence. Please read and follow these instructions completely for warranty compliance purposes and to ensure that you enjoy your Oasis fence and outdoor space to the fullest.

Cleaning your fence

Oasis fencing is naturally anti-microbial and stain resistant. Maintain the cleanliness of your fence by scrubbing or pressure washing when needed. For optimal longevity, Eva-Last® recommends cleaning your Oasis fence when you notice stubborn marks from birds or weather. Oasis fencing will weather to a natural matte finish over time and the steps in this cleaning and care guide will help to preserve its aesthetics and longevity.

The following basic and deep cleaning procedures are suitable for addressing mould and mildew, bird droppings, rust stains, tape marks, and most other forms of messes and stains. All of these are considered to be normal maintenance and are, therefore, not covered by the Oasis limited warranty.

What you will need

In order to properly clean your Oasis fence you will need only standard household cleaning supplies, including:

A high-pressure hose with fan tip

Water

Dishwashing Liquid

Bucket

Sponge on telescopic arm

Hard-bristled broom with telescopic arm or pool brush

Please note: Do NOT use “off-the-shelf composite cleaners” on Oasis. These may jeopardise the board surface and nullify any related warranty claims. Instead, use regular liquid dishwashing soap.

Basic cleaning procedure

Follow these basic steps for the general care and cleaning of your Oasis fencing:

STEP 1:

Apply soapy water to your fence using a sponge for low-lying areas or a sponge or squeegee with a telescopic handle for high-lying areas.

STEP 2:

Use a hard-bristled broom with telescopic arm or pool brush to scrub the fence. Clean thoroughly enough to remove all dirt and residue. Scrub in the direction of the grain of your fence boards' surfaces.

STEP 3:

Rinse your fence's surface completely with water.

Deep cleaning procedure

In order to remove stubborn spots, stains, or excessive dirt or organic waste from your Oasis fence, carefully use a high-pressure washer which has a hose with a wide fan tip. Ensure that the pressure of this hose remains under 1500 psi and keep it at least 300 mm away from your fence boards' surface when spraying. Take extreme care when pressure washing your fence. Stop immediately if any unusual change to your fence boards' surfaces appears and contact Eva-Last®.

For best cleaning results scrub your Oasis fence with a hard-bristle broom with a telescopic arm, pool brush, or long-reach squeegee while pressure washing. Regular deep cleanings with both pressure washing and scrubbing will maximise the long-term performance of your Oasis fencing.

General care tips

- Clean up spots, dirt, and messes as soon as possible to prevent them from becoming stains.
- A toilet bowl brush or similar bristled brush can be used to remove rust or similar stains.
- Most water, aqueous salt solutions, detergent solutions, dilute acids, and alkalis are also acceptable. However, any cleaning agent should first be tested on a small patch of fence or a scrap piece of Oasis material before use. Consult the Oasis Material Safety Data Sheet (MSDS) and Oasis Technical Data Sheet (TDS) for further information. Any cleaning agent used on Oasis which does not comply with the MSDS or TDS may nullify future warranty claims.

What to avoid

Protect your Oasis fencing, including their Eva-tech outer coating, and ensure warranty compliance, by keeping the following away from your Oasis products:

- "Off-the-shelf" composite cleaners
- Strong detergents, oxidant concentrated mineral acids, aromatic and/or halogenated hydrocarbons, esters, ethers, or ketones
- Insect sprays which contain any ingredient that may be incompatible with Oasis as listed in Appendix B of the Eva-tech TDS
- Undiluted chlorine
- PVC glues, cement, and paint

Conclusion

Oasis fencing gives your outdoor space an upgrade and lets you use your free time for relaxation instead of bothersome maintenance. By adhering to these simple cleaning and care procedures and the terms of your Oasis warranty you will be able to sit back and enjoy your Oasis fence for years to come.
