VistaClad

Open Joint Profile Cladding

DURABLE, LOW-MAINTENANCE CLADDING IN PROVEN EVA-TECH TECHNOLOGY

The VistaClad open-joint cladding system in proven Eva-tech technology combines cost-effective, lightweight profiles with a secure clip-lock installation, reducing material usage while maintaining span capabilities. Enhanced ventilation prevents moisture build-up, while the concealed fastening system and trim deliver a seamless, polished finish. Engineered for durability, it resists decay, insects, UV, and harsh weather, making it ideal for elevated installations in residential or commercial projects. Low-maintenance and sustainably manufactured with responsibly sourced materials, this complete cladding solution ensures long-lasting performance, installation efficiency, and eco-friendly appeal.

TAKE HOME THE BENEFITS

COST-EFFECTIVE SYSTEM

Eva-tech technology on an optimised profile, saves on material cost and installation time

EASY TO INSTALL

Secure clip-lock fixing system ensures boards stay in place, even in strong winds

VENTILATED SYSTEM

Enhanced system ventilation promotes airflow, preventing moisture-related issues

LIGHTWEIGHT PROFILE

Strong, lightweight profiles enhance handling & installation efficiency

COMPLETE CLADDING SOLUTION

Concealed clip strip system combined with off the shelf trim provide a seamless, finished appearance

DECAY RESISTANT

Resistant to biodegradation, corrosion, insects, UV exposure, & harsh weather conditions

LOW-MAINTENANCE

Designed for both residential, commercial projects & elevated installations with minimal upkeep

ECO-FRIENDLY

Sustainably manufactured using responsibly sourced raw materials

EVA-TECH BAMBOO COMPOSITE CLADDING

The Open Joint Profile (OJP) is a ventilated cladding board designed for clean detailing, concealed fixing, and durable exterior performance. Manufactured in Eva-tech and installed using the VistaClad clip strip system, it combines open joint design with a lightweight, optimised profile. The result is a cladding solution with no visible fasteners, a consistent surface finish, and practical installation handling. Its angled geometry helps keep the supporting structure out of sight, while the open joint layout supports airflow and drainage behind the façade. OJP offers a refined, low-maintenance finish suited to modern exterior applications.

Eva-tech

BAMBOO COMPOSITE TECHNOLOGY

Core & surface material:

Bamboo PE composite

Cross section	Product description	Dimensions	Coverage	Mass
	Standard (Eva-tech)	152.6 x 18.6 mm (5450 mm Lengths)	6.6 m/m ²	1.75 kg/m

VISTACLAD IN EVA-TECH COLOUR TECHNOLOGY

COLOUR RANGE: BRUSHED FINISH

TECHNOLOGY: **Eva-tech**

NOTE: Due to printing and/or screen variations, colours in the brochure may differ slightly from the actual products.

THE CLIP STRIP

The VistaClad clip strip uses a punched spring design that allows the cladding boards to be easily and securely clicked into place. The epoxy-coated, zinc-galvanised strip profile provides flexibility in application and allows for optimal ventilation and drainage.

The dual spring-loaded clip creates a rigid hold and locks the boards in place.

TOP HAT CLIP STRIP

The top hat clip strip fits over 38 mm (timber) and 40 mm (composite and steel) supports. As a result, the ventilation/drainage cavity will be influenced by the thickness of the support as well as the fixing method but the minimum depth the top hat profile allows for is 25.4 mm. Fixing can be done through the face, the side, and either side of the clip strip base. Fixing through the side allows for the top hat to be plumbed quickly and easily.

Dimensions	85.4 x 35.9 mm (2.7 m lengths)
Weight	1.2 kg/m

TRIM APPLICATIONS

Trim accessories deliver a flawless, professional finish by seamlessly concealing structural components and expansion gaps. Designed for maximum versatility, the VistaClad open-joint system integrates easily with standard off-the-shelf trim or flashing.

LOW ENVIRONMENTAL IMPACT

Sustainable manufacturing & use of raw material

CHOOSE SUSTAINABLE BUILDING MATERIALS

RENEWABLE RESOURCES & RENEWABLE ENERGY

We believe that how we manufacture is just as important as what we manufacture when it comes to going green. That's why we've traded in fossil fuels for renewable energy. Our products use solar power as part of our manufacturing process. We are fully committed to bringing you a product that's holistically sustainable.

Every Eva-Last outdoor range pairs recycled raw ingredients with bamboo for a stronger, more sustainable composite. Bamboo rejuvenates over 30 times faster than traditional hardwoods and it releases 35% more oxygen into our air. Eva-Last is internationally recognised for our commitment to the environment. We're proud of the work we do to promote environmental sustainability, and invite you to choose timber alternatives that are gentle on the Earth.

- Made from recycled materials
- No trees felled
- No treatment or toxic chemicals required for maintenance
- Solar power used in the manufacturing process
- Reduced impact on landfills
- Reduced carbon footprint
